

KERA SIT2SIT HOIST

A revolution in Manual Handling

Solve your transfer issues with the Kera

The Kera's unique design uses an easy to fit backstrap and chestpad to securely hold a non weight bearing person. Now it's possible for a single caregiver to quickly and safely transfer and perform hygiene processes for people that have no standing strength or balance.

Give time, energy and dignity back to people living with a disability by eliminating the need for multiple transfers during hygiene processes. The Kera SIT2SIT provides a comfortable and safe option thereby eliminating the need for traditional hoists or manual transfers.

The Kera SIT2SIT has improved the lives of hundreds of Kiwis for more than three years.

- No weight bearing ability needed
- Users are held firmly by the upper body making the SIT2SIT ideal for amputees and tetraplegics
- Only one caregiver needed
- Replacement for a standing hoist or sling hoist
- No holding on, no standing/sitting strength or balance required

- Accessory range to adapt to user ability and size, including children
- Independently laboratory tested to international hoist standards (AU/NZS 10535)
- Entered in the ARTG (388973)

Steve's Story

Steve has MND. He has limited mobility and is dependent on those who care for him to go about his daily life. He sees the Kera as a way to stave off the progression to the inconvenience of a full hoist.

Steve has a full life, filled with family and adventure. Having the Kera has allowed him to travel far more easily. Most importantly, the Kera gets him on to his scooter where he can enjoy the freedom and independence of a ride around the neighbourhood
